My Experience in collaboration

Last month, my classmates and I worked on a collaborative project to create a personal portfolio website. At first, I felt confused because there were many things to prepare, but I was also excited to learn new things.

During the project, I designed the website layout, arranged the English content, and learned coding using HTML, CSS, Bootstrap, and JavaScript. I faced some problems while coding, such as errors and unfinished features, but I kept trying to fix them.

Slowly, my website became better and more responsive.

In the end, I presented my portfolio website in front of the class. I felt nervous but also proud because I could finish the project well. This experience helped me improve my creativity, coding skills, and confidence.
